

CLAIMSWhat is claimed is:

1. A process for manufacturing macroelectronics comprising the steps of:
producing thin film active electronics on separate carrier substrates; and
combining said substrates using anisotropic electrical conductors or light
guides.
2. The process of claim 1 wherein one of said substrates is a flexible foil.
3. The process of claim 1 wherein one of said substrates is a rigid plate.
4. The process of claim 2 wherein the material for one of said substrates is
plastic.
5. The process of claim 3 wherein the material for one of said substrates is
plastic.
6. The process of claim 2 wherein the material for one of said substrates is
glass.
7. The process of claim 3 wherein the material for one of said substrates is
glass.
8. The process of claim 2 wherein the material for one of said substrates is
metal.
9. The process of claim 3 wherein the material for one of said substrates is
metal.
10. The process of claim 1 wherein the thin film active electronics are
produced continuously on separate carrier substrates.
11. The process of claim 4 wherein organic light emitting diodes are formed
on the plastic substrate.
12. The process of claim 5 wherein organic light emitting diodes are formed
on the plastic substrate.
13. The process of claim 6 wherein organic light emitting diodes are formed
on the glass substrate.
14. The process of claim 7 wherein organic light emitting diodes are formed
on the glass substrate.

15. The process of claim 6 wherein thin film transistors are formed on the glass substrate.

16. The process of claim 7 wherein thin film transistors are formed on the glass substrate.

5 17. A process of making electronic circuits comprising the steps of:
forming at least two active circuits on separate carrier substrates; and
combining said active circuits by connecting them with a material which
conducts in only a single direction.

10 18. A method of manufacturing an electronic display comprising the steps of:
depositing a transparent conductor on a transparent substrate;
forming a thin film organic light emitting diode circuit on said
transparent conductor;
forming a thin film transistor circuit; and
15 laminating said circuits to each other.

19. The method of claim 18 wherein said laminating step uses an adhesive anisotropic conductor.

20. The method of claim 19 wherein the conductor is an electrical or optical conductor.

20 21. The method of claim 19 wherein the bonding layer is the conductor.

25 22. A method of manufacturing an electronic circuit comprising the steps of:
forming a first active circuit on a first plane;
forming a second active circuit on a second plane; and
co-laminating said first and second planes with an anisotropic conductor
in between.
